Energy performance certificate (EPC)				
Windmill View Brenchley Road Brenchley TONBRIDGE TN12 7NS	Energy rating	Valid until: 13 January 2025 Certificate number: 9848-0098-7359 -3115-4950		
Property type		Detached house		
Total floor area		221 square metres		

### Rules on letting this property

Properties can be rented if they have an energy rating from A to E.

If the property is rated F or G, it cannot be let, unless an exemption has been registered. You can read guidance for landlords on the regulations and exemptions (https://www.gov.uk/guidance/domestic-private-rented-property-minimum-energy-efficiency-standard-landlord-guidance).

# Energy efficiency rating for this property

This property's current energy rating is C. It has the potential to be A.

<u>See how to improve this property's energy</u> performance.

The graph shows this property's current and potential energy efficiency.

Properties are given a rating from A (most efficient) to G (least efficient).

Properties are also given a score. The higher the number the lower your fuel bills are likely to be.

For properties in England and Wales:

the average energy rating is D the average energy score is 60

## Breakdown of property's energy performance

This section shows the energy performance for features of this property. The assessment does not consider the condition of a feature and how well it is working.

Each feature is assessed as one of the following:

- very good (most efficient)
- good
- average
- poor
- very poor (least efficient)

When the description says "assumed", it means that the feature could not be inspected and an assumption has been made based on the property's age and type.

Feature	Description	Rating
Walls	Average thermal transmittance 0.23 W/m²K	Very good
Roof	Average thermal transmittance 0.15 W/m <sup>2</sup> K	Good
Floor	Average thermal transmittance 0.24 W/m <sup>2</sup> K	Good
Windows	High performance glazing	Very good
Main heating	Boiler and underfloor heating, oil	Average
Main heating control	Time and temperature zone control	Very good
Hot water	From main system, plus solar	Good
Lighting	Low energy lighting in 38% of fixed outlets	Average
Secondary heating	Room heaters, wood logs	N/A
Air tightness	(not tested)	N/A

#### Low and zero carbon energy sources

Low and zero carbon energy sources release very little or no CO2. Installing these sources may help reduce energy bills as well as cutting carbon emissions. The following low or zero carbon energy sources are installed in this property:

- · Biomass secondary heating
- Solar water heating

#### Primary energy use

The primary energy use for this property per year is 83 kilowatt hours per square metre (kWh/m2).

This property produces	4.1 tonnes of CO2
This property's potential production	1.2 tonnes of CO2
By making the <u>recommended changes</u> , you could reduce this property's CO2 emissions by 2.9 tonnes per year. This will help to protect the environment	
Environmental impact rating assumptions about average	occupancy and
energy use. They may not reflect how energy is consumed by the people living at the property.	
	This property's potential production By making the <u>recommende</u> could reduce this property's 2.9 tonnes per year. This wi environment. Environmental impact rating assumptions about average energy use. They may not r

## Improve this property's energy performance

By following our step by step recommendations you could reduce this property's energy use and potentially save money.

Carrying out these changes in order will improve the property's energy rating and score from C (77) to A (93).

Step	Typical installation cost	Typical yearly saving
1. Low energy lighting	£130	£45
2. Solar photovoltaic panels	£5,000 - £8,000	£280
3. Wind turbine	£15,000 - £25,000	£530

#### Paying for energy improvements

Find energy grants and ways to save energy in your home. (https://www.gov.uk/improve-energy-efficiency)

# Estimated energy use and potential savings

Estimated yearly energy cost for this property	£926
Potential saving	£45

The estimated cost shows how much the average household would spend in this property for heating, lighting and hot water. It is not based on how energy is used by the people living at the property.

The potential saving shows how much money you could save if you <u>complete each</u> recommended step in order.

For advice on how to reduce your energy bills visit <u>Simple Energy Advice</u>

(https://www.simpleenergyadvice.org.uk/).

#### Heating use in this property

Heating a property usually makes up the majority of energy costs.

# Estimated energy used to heat this property

Type of heating	Estimated energy used	
Space heating	10349 kWh per year	
Water heating	2820 kWh per year	

# Potential energy savings by installing insulation

The assessor did not find any opportunities to save energy by installing insulation in this property.

### Contacting the assessor and accreditation scheme

This EPC was created by a gualified energy assessor.

If you are unhappy about your property's energy assessment or certificate, you can complain to the assessor directly.

If you are still unhappy after contacting the assessor, you should contact the assessor's accreditation scheme.

Accreditation schemes are appointed by the government to ensure that assessors are qualified to carry out EPC assessments.
